Conveying the Passage of Time through Photography

Time is a dimension.

[Fong Qi Wei](#) is an artist and photographer who “strives to make images which touches both the feeling part and the thinking part of your mind.” He wants to get your attention (the feeling part) and hopefully engage you on a deeper level as you look at an image for a longer period of time (the thinking part).

In a series entitled [*Time is a Dimension*](#), Wei conveys the passage of time through a series of playful and innovative composite images spanning 2-4 hours, typically at sunrise or sunset (when the skies colors change most dramatically). He then splices together the numerous photographs into a single image, creating a *collage of time*.

Photography is a medium that can freeze time. The word snapshot suggests that a tiny slice of time is recorded for posterity... A photographic print is flat, and essentially is made of 2 dimensions: length and width.

But the print is still an instance. Most paintings and photographs are freezing a moment in time. However, the world works in continuous motion. We experience a sequence of time, and that's why a video is somehow more relatable than a view of a freeze frame; a moment in time.
